Coordinating local programs and public education to reduce stormwater pollution and improve watershed health since 1999.

- Stormwater management
- Watershed protection
- Surface water quality

The GLRC is a guiding body comprised of regulated Municipal Separate Storm Sewer System (MS4) communities within the Greater Lansing region.

The committee guides the implementation of the stormwater program for MS4s within the Grand, Red Cedar, and Looking Glass River watersheds and is administered by the Tri-County Regional Planning Commission.

Separate storm sewers capture runoff water in catch basins and pipes that lead directly to rivers, streams, and lakes without being processed at a treatment plant.

Oil, pet waste, sediment, or litter that is washed into the system enters and impacts waterbodies.

To limit pollution, the EPA requires operators of MS4s in urbanized areas to implement programs and practices to control polluted stormwater runoff through the use of National Pollutant Discharge Elimination System (NPDES) permits.

The GLRC collaborates with members to meet their NPDES requirements and protect our waters.
